

Statement of Company's Environmental Policy

In line with business plan objectives, our Environmental Management System, and the requirements of ISO 14001:2015, the Directors have agreed to commit to:

- Identify and set objectives for the environmental aspects of our business, and appropriate targets to reduce environmental impacts of the business.
- Look for ways to continually improve environmental performance and prevention of pollution.
- Comply with legal requirements on environmental issues and other similar requirements.
- Continually improve our Environmental Management System.

As a design consultancy there are two primary environmental aspects to our business, both of which are addressed by the implementation of this policy:

- Our direct impact as a business is through energy and water use, waste and pollution.
- Our impact as designers and architects is in developing project designs.

We regularly record, monitor and communicate the environmental impact of our work and we communicate our environmental achievements through our website.
